

3rd INTERNATIONAL SYMPOSIUM ON SINGLET FISSION AND PHOTON FUSION

Emerging Solar Energy Technologies

Milano, 10th-13rd October 2022

The International Symposium on Singlet Fission and Photon Fusion (ISPF²) is the major forum for discussion and dissemination of new results on all the topics concerning photon managing processes which can be **applied to the main solar-energy conversion technologies.**

Following the success of the 2016 and 2018 ISPF² conferences in Gothenburg, and the stop due to the pandemic emergency, it is our great pleasure to invite you to join the **3rd edition of this meeting which to be held in Milano on 10th-13th October, 2022.**

The symposium is focused on the rapidly growing fields of photo-physics and materials science and will cover all aspects of:

- Singlet fission
- Photon fusion
